Java in 100 Seconds **By: Fireship** ## Ø=Ý9 Summary Java is a highlevel multi-paradigm programming language famous for its ability to compile to platform independent B code.

Instead of compiling to machine code like C or C++ it compiles to bik code that can run on any operating system without recompiling.

It Powers Enterprise web apps with spring framework Big Data pipelines with Hadoop mobile apps on Android and even things like the controller for NASA's Maestro Mars Rover.

To get started install the Java development kit or jdk then create a file ending in Java every Java program starts with a class name.
