# Untitled Video \*\*By: Unknown Author\*\* ## Ø=Ý9 Overview Java is a highlevel multi-paradigm programming language famous for its ability to compile to platform independent B code.

Instead of compiling to machine code like C or C++ it compiles to bik code that can run on any operating system without recompiling.

To get started install the Java development kit or jdk then create a file ending in Java.

Use the Java command to tell the jvm to interpret and run that file congratulations you just built an Enterprise grade application this has been Java in 100 seconds hit subscribe for more short videos like this and if we somehow get to 100,000 likes on this video I'll do a full Java tutorial.

Thanks for watching and I will see you in the next one.
